PROFILE

Former Senior Cloud Consultant at Oracle Geneva (2022–2026), delivering AWS/OCI infrastructure and automation for Swiss banking and enterprise clients. Terraform, Linux, IAM, networking and CI/CD, with experience translating client requirements into documented implementations and operational handover.

CORE EXPERTISE

Cloud	OCI, AWS, Azure — IAM, VCN/VPC, subnets, routing, security, governance, migration
Infrastructure as Code	Terraform landing zones and reusable modules; Ansible VM configuration
CI/CD & Automation	GitHub Actions, Dev/Staging/Prod workflows, manual approval gates, Bash
Linux	Ubuntu, Oracle Linux, Debian — monitoring, troubleshooting, patching, handover
Containers & Orchestration	Docker, Kubernetes, EKS, Helm
Development & Observability	Python, pytest, Prometheus, Grafana
Tools	Git, Make; ChatGPT, Claude, coding agents; local LLMs: Ollama, LM Studio, Qwen.

PROFESSIONAL EXPERIENCE

Freelance Cloud & DevOps Engineer · Switzerland – France — 2026 – Present

Developing a Cloud & DevOps consulting activity alongside independent infrastructure projects. Focus on Terraform provisioning, Linux automation, secure deployment workflows and Kubernetes platforms, with documentation, operational safeguards and cost-conscious cleanup; selected projects on page 3.

Senior Cloud Consultant · Oracle, Geneva — 04/2022 – 01/2026

Worked with Swiss clients from requirements and architecture through cloud implementation and handover, combining infrastructure automation, security, migration support and technical documentation.

SELECTED CLIENT ENGAGEMENTS

Avaloq — Cloud automation and controlled delivery

Delivered AWS/OCI Terraform landing zones, Ansible VM configuration and GitHub Actions across Dev, Staging and Production; manual approvals, IAM, networking, governance and OCI Cloud Guard.

LEMO — Reusable infrastructure for cloud migration

Contributed to a reusable Terraform landing zone covering networking, IAM and governance for repeatable cloud migration.

Rothschild — Secure infrastructure delivery

Designed OCI SFTP infrastructure (VCNs, subnets, routing, controlled ports); implemented SSH keys, SSO, IAM, security controls and audits.

Cross-client — Linux operations, automation and handover

Implemented Terraform/Bash automation and supported Linux monitoring, troubleshooting and patching; contributed to technical audits, production readiness, documentation and handover.

Swissquote and Corner Bank — Migration scripting and database tuning

Contributed to Exadata Cloud@Customer migrations, scripting and database performance tuning for critical banking workloads.

IEC — Cloud data processing workflows

Supported ETL/ELT activities with Oracle Autonomous Data Warehouse and Oracle Analytics Cloud.

EARLIER EXPERIENCE

Blockchain Instructor (Freelance) · ISG, Lyon 2022

Short teaching assignment

Master's-level course on blockchain and cryptocurrency fundamentals: Bitcoin architecture, smart contracts, centralized and decentralized marketplaces, and investment risk. Translated complex technical and economic concepts for non-specialist audiences.

Educational Advisor · Epitech Digital, Lyon 2021 – 2022

Coordinated academic activities, instructors, module planning, student follow-up, project defenses and assessments. Reported progress to academic management and proposed improvements to educational processes.

IT Project Manager (Freelance) · IglooHub, Lyon 2021

Managed web projects end-to-end from client requirements and scope through validation and delivery, coordinating developers, designers, content, SEO and testing contributors.

Educational Advisor · EPITECH, Lyon 2020

Supported students during their first months of C programming through structured follow-up, technical project guidance and progress monitoring; contributed to project evaluation.

Mobile Developer · Datapp 2018 – 2019

Developed mobile application features using Ionic, Angular and Cordova; handled application maintenance and feature testing.

EDUCATION

Master of Science in Computer Science · Epitech, Paris 2015 – 2020

Algorithms, data structures, distributed systems, software engineering and object-oriented programming.

Master of Science in Computing · Dublin City University, Dublin 2018

Advanced algorithms, distributed systems, databases and international software engineering projects.

CERTIFICATIONS

OCI Multicloud Architect Certified Associate

OCI Certified Foundations Associate

OCI AI Foundation Associate

Docker Foundations Professional Certificate

Kubernetes: Package Management with Helm

Career Essentials in GitHub Professional Certificate

ServiceNow IT Leadership Professional Certificate

Atlassian Agile Project Management Professional Certificate

Oracle Database Explorer

LANGUAGES

French — native · English — C1 (fluent)

SELECTED INDEPENDENT PROJECTS

Personal projects, with public source code on GitHub.

AWS EKS Platform Golden Path

Objective — Build a reproducible AWS deployment platform combining infrastructure automation, controlled releases and operational visibility.

AWS · Terraform · EKS · ECR · Docker · Helm · GitHub Actions · OIDC · Prometheus · Grafana

- Provisioned the platform with Terraform: EKS cluster and ECR registry, with Docker images deployed via Helm.
- Configured GitHub Actions with keyless AWS OIDC authentication and manual approval before release.
- Smoke tests after deployment and rollback procedure.
- Added Prometheus/Grafana observability and cost controls through ephemeral infrastructure, teardown and cleanup checks.

Repository: github.com/Badis-M/aws-eks-platform-golden-path

Docker Disk Guardian

Objective — Inspect Docker disk usage and prepare rule-based cleanups safely.

Python · Docker · pytest · GitHub Actions

- Python CLI with clearly separated inspection, planning and execution stages.
- Explicit confirmation required before any deletion; active resources are protected.
- Deterministic reports of disk usage and planned cleanup.
- Automated tests with pytest and CI checks on GitHub Actions.

Repository: github.com/Badis-M/docker-disk-guardian

Azure Application Modernization

Personal project

Objective — Modernize a legacy-style application through containers, infrastructure as code and reproducible Azure deployments.

Azure · AKS · ACR · Terraform · Docker · Kubernetes · Kustomize · PostgreSQL · GitHub Actions · OIDC · Prometheus · Grafana

- Containerized a FastAPI application with PostgreSQL, progressing from Docker Compose and local Kubernetes to AKS.
- Provisioned Azure infrastructure with Terraform and remote state in Azure Blob Storage; Kustomize for environment-specific configuration.
- GitHub Actions CI, Azure OIDC authentication and a manual AKS deployment workflow, with ACR integration.
- Application metrics and Prometheus/Grafana observability; documented troubleshooting and infrastructure cleanup.
