

Cloud & DevOps Engineer

Cloud consultant with four years at Oracle Geneva, delivering AWS and OCI infrastructure, Terraform automation and controlled CI/CD for Swiss clients in regulated environments. Experience in Linux, IAM and networking, complemented by hands-on Kubernetes platforms, observability and Python tooling.

Core Expertise

Infrastructure as Code: Terraform landing zones and reusable infrastructure; Ansible VM configuration; Bash scripting

Cloud Infrastructure: AWS and OCI, IAM, VPC/VCN, subnets, routing, governance and migration support

Containers - hands-on: Docker, Kubernetes, EKS, kind, Helm, health/readiness probes, resource controls, smoke tests, Prometheus and Grafana

CI/CD Delivery: GitHub Actions, Development/Staging/Production workflows, manual approval gates and release validation

Linux Operations: Ubuntu, Oracle Linux, Debian; monitoring, troubleshooting, security patching and operational handover

Engineering & AI - hands-on: Python, Git, pytest, Make; ChatGPT/Claude prompting and coding agents; local LLMs with Qwen, Ollama and LM Studio

Professional Experience

04/2022 - 12/2025

SENIOR CLOUD CONSULTANT

Oracle, Geneva

Delivered cloud infrastructure automation and operational support from requirements and architecture through implementation and handover. Worked with Swiss financial institutions and other clients on reproducible environments, controlled releases, migration scripting and Linux operations.

Selected Oracle Client Engagements

Avaloq | Terraform, Ansible and controlled CI/CD

Delivered AWS and OCI landing zones with Terraform, Ansible VM configuration and GitHub Actions workflows across Development, Staging and Production. Applied manual approval gates alongside IAM, networking, governance and OCI Cloud Guard controls.

LEMO | Automated OCI landing zone

Contributed to a reusable Terraform landing zone covering networking, IAM and governance, providing a repeatable infrastructure foundation for cloud migration.

Cross-client cloud operations | Bash automation and Linux production support

Implemented Terraform and Bash automation; supported Linux monitoring, troubleshooting, proactive and reactive maintenance and security patching. Contributed to technical audits, production readiness, operational documentation and handover.

Rothschild | Secure infrastructure delivery

Designed OCI infrastructure for SFTP services with VCNs, subnets, routing and controlled ports. Implemented SSH key authentication, SSO, IAM, security controls and audit mechanisms.

Swissquote and Corner Bank | Migration scripting and database tuning

Contributed to Exadata Cloud@Customer migrations, scripting and database performance tuning for critical banking workloads, supporting operational quality and readiness.

IEC | Cloud data processing workflows

Supported ETL/ELT activities using Oracle Autonomous Data Warehouse and Oracle Analytics Cloud, contributing to cloud-based data processing and analytics delivery.

Earlier Experience

02/2022 - 03/2022

BLOCKCHAIN TEACHER - FREELANCE

ISG, Lyon

Taught master's-level blockchain and cryptocurrency fundamentals, covering Bitcoin architecture, smart contracts, centralized and decentralized marketplaces, and investment risk. Translated complex technical and economic concepts for non-specialist audiences.

03/2021 - 03/2022

EDUCATIONAL ADVISOR

Epitech Digital, Lyon

Coordinated academic activities, instructors, module planning, student follow-up, project defenses and assessments. Reported progress to academic management and proposed improvements to educational processes and student support.

01/2021 - 12/2021

IT PROJECT MANAGER - FREELANCE

IglooHub, Lyon

Managed web projects end-to-end from client requirements and scope through validation and delivery. Coordinated developers, designers, content, SEO and testing contributors while maintaining quality, timelines and stakeholder communication.

03/2020 - 10/2020

EDUCATIONAL ADVISOR

EPITECH, Lyon

Supported students during their first months of C programming through structured follow-up, technical project guidance and progress monitoring. Contributed to academic coordination, project evaluation and administrative activities.

09/2018 - 09/2019

MOBILE DEVELOPER

Datapp

Developed mobile application features using Ionic, Angular and Cordova, and handled application maintenance and feature testing.

Hands-on Projects

AWS EKS Platform Golden Path | Personal project

AWS, Terraform, EKS, Docker, Helm, GitHub Actions, OIDC

Built an ephemeral EKS delivery workflow from Docker/ECR packaging to Helm deployment. Validated keyless GitHub Actions authentication, approval-gated releases, smoke tests, rollback and infrastructure cleanup.

Docker Disk Guardian | Personal project

Python, Docker, pytest, GitHub Actions

Developed a Python CLI to inspect Docker disk usage and plan policy-based cleanup. Required explicit approval before deletion, protected active resources and added deterministic reports, automated tests and CI checks.

Education

2015 - 2020

Master of Science in Computer Science

Epitech (School of Computer Science), Paris

Algorithms, data structures, distributed systems, software engineering and object-oriented programming.

2018

Master of Science in Computing

Dublin City University (DCU), Dublin

Advanced algorithms, distributed systems, databases and international software engineering projects.
